

THE SWIMMING HOLE

The Swimming Hole moves the overall Riverwalk closer to the River. Here, instead of observing the water, water is integrated into the overall boardwalk design forming a space of interaction. The children's fountain, the prominent feature in this sunniest of bays, creates a space for children to play, feel water on their faces, run through mist and spray, and cool down in the summer heat. The fountain is formed by a series of long and gracious stairs that function as seating elements for accompanying parents and pedestrians looking for a place to relax in the sun. As this particular section of the arcade district benefits from the most sunlight, an urban sundeck is provided adjacent to the fountain accommodating resting parents and Riverwalk users.
